Basic Design - Atomic Rockets Everything about fundamental spacecraft design revolves around the Tsiolkovsky rocket equation..  $\hat{v} = V_e * \ln[R]$ . The variables are the velocity change required by the mission ( $\hat{v}$  or delta-V), the propulsion system's exhaust velocity ( $V_e$ ), and the spacecraft's mass ratio (R). Remember the mass ratio is the spacecraft's wet mass (mass fully loaded with propellant) divided by the dry mass.

Developments of electric cars and fuel cell hydrogen ... Any electro-chemical device that transforms chemical energy of any fuel directly into electrical energy is called a fuel cell. One of the main characteristics of fuel cells is that the reactants are fed directly from external sources unlike batteries which store the reactants internally. Decadence, Rome and Romania, the Emperors Who Weren't, and ... As Peter Heather puts it [The Fall of the Roman Empire, Oxford, 2006], Rome was now an "inside-out" Empire -- the center and the periphery had exchanged places (as illustrated in the animation at left). This transformation is scrupulously ignored in popular treatments of the Roman Empire, even in apparently well researched presentations on venues like the History Channel.

Fusion power - Wikipedia Fusion power is a proposed form of power generation that would generate electricity by using heat from nuclear fusion reactions. In a fusion process, two lighter atomic nuclei combine to form a heavier nucleus, while releasing energy. Devices designed to harness this energy are known as fusion reactors.. Fusion processes require fuel and a confined environment with sufficient temperature. Progress in dynamic simulation of thermal power plants ... 1. Introduction. The expansion of intermittent electricity generation, in particular wind power and photovoltaics, can lead to the seemingly paradox situation of negative electricity prices at times of low power demand and/or high renewable power supply.
